

4 March 2022

## Civilian casualty report<sup>1</sup>

From 4am on 24 February 2022 until 12 midnight on 3 March 2022, the Office of the UN High Commissioner for Human Rights (OHCHR) recorded 1,006 civilian casualties in Ukraine: 331 killed (71 men, 40 women, 7 boys, and 3 girls, as well as 9 children and 201 adults whose sex is yet unknown) and 675 injured (51 men, 40 women, 9 girls, and 2 boys, as well as 20 children and 553 adults whose sex is yet unknown).<sup>2</sup>

440 casualties (77 killed and 363 injured) were recorded in Donetsk and Luhansk regions: 331 (54 killed and 277 injured) in Government-controlled territory, and 109 (23 killed and 86 injured) in territory controlled by the self-proclaimed 'republics'.

566 casualties (254 killed and 312 injured) were recorded in other regions of Ukraine (the city of Kyiv, and Cherkasy, Chernihiv, Kharkiv, Kherson, Kyiv, Odesa, Sumy, Zaporizhzhia, and Zhytomyr regions) in places, which were under Government control when casualties occurred.

Most of the civilian casualties recorded from 4am on 24 February 2022 until 12 midnight on 3 March 2022, were caused by the use of explosive weapons with a wide impact area<sup>3</sup>, including shelling from heavy artillery and multi-launch rocket systems, and missile and air strikes.

OHCHR believes that the real figures are considerably higher, especially in Government-controlled territory and especially in recent days, as the receipt of information from some locations where intensive hostilities have been going on was delayed and many reports were still pending corroboration. This concerns, for example, the town of Volnovakha (Government-controlled part of Donetsk region) where hundreds of civilian casualties have been alleged. These figures are being further corroborated and are not included in the above statistics.

On 1 March, the Minister of Health of Ukraine said that 16 children have been killed since 24 February.

According to the Adviser – the Commissioner of the President of Ukraine for the Rights of the Child and Children's Rehabilitation, as of 4 March, 28 children were killed and 64 were injured in Government-controlled territory.

OHCHR also notes a report by the Ministry of Emergencies of Ukraine, according to which as of 09.00 (Kyiv time) 4 March, the total number of civilian casualties in Kharkiv region was 39 killed and 272 injured, including 10 children.

---

<sup>1</sup> Since 2014, OHCHR has been documenting civilian casualties in Ukraine. Reports are based on information that the UN Human Rights Monitoring Mission in Ukraine (HRMMU) collected through interviews with victims and their relatives; witnesses; analysis of corroborating material confidentially shared with HRMMU; official records; open-source documents, photo and video materials; forensic records and reports; criminal investigation materials; court documents; reports by international and national non-governmental organisations; public reports by law enforcement and military actors; data from medical facilities and local authorities. All sources and information are assessed for their relevance and credibility and cross-checked against other information. In some instances, corroboration may take time. This may mean that conclusions on civilian casualties may be revised as more information becomes available and numbers may change as new information emerges over time.

Since 24 February 2022, in the context of the Russian Federation's military action in Ukraine, HRMMU has been unable to visit places of incidents and interview victims and witnesses there. All other sources of information have been extensively used, including HRMMU contact persons and partners in places where civilian casualties occurred. Statistics presented in the current update are based on individual civilian casualty records where the "reasonable grounds to believe" standard of proof was met, namely where, based on a body of verified information, an ordinarily prudent observer would have reasonable grounds to believe that the casualty took place as described.

<sup>2</sup> An increase in figures in this update compared with the previous update (as of 24.00 2 March 2022) shall not be attributed to civilian casualties that occurred on 3 March only, as during the day OHCHR also had corroborated some casualties that occurred on previous days.

<sup>3</sup> The use of explosive weapons with a wide impact area should be avoided in densely populated areas, due to the significant likelihood of indiscriminate effects. Weapons with a wide impact area include: a) munitions with a large destructive radius, such as large bombs or missiles; b) weapons that tend to have an inaccurate delivery system, such as unguided indirect fire weapons, including artillery and mortars; and c) weapons designed to deliver munitions over a wide area, such as multi-launch rocket systems and cluster munitions.
